The second law of thermodynamics

- Explain why all real engines are less efficient than the Carnot engine
- In a real engine does the gas inside the piston return to its original state on completion of a cycle as happens in the Carnot cycle? Explain your reasoning
- Write the Clausius inequality.
- Give a mathematical expression for the second law of thermodynamics

mathematics

The second law of thermodynamics

- Explain in your own words how the mathematical expression you just arrived at for the second law of thermodynamics is derived from the Clausius Inequality.
