

The ergodic theorem

•	• Explain the meaning of the word ergodic in the context of Markov chains.					
•	Why can't an ergodic Markov chain have transient states?					
•	Give a statement of the ergodic theorem ensuring that you define all the terms in the equation.					
•	Explain how you can calculate the expected return time to a state if you are given the stationary distribution.					

The ergodic theorem

• Explain what is meant b	y the period	of a state in the	e context of Markov	chains.
---------------------------	--------------	-------------------	---------------------	---------

• What is the greatest common divisor for the following sets of numbers $\{2,4,6,8\}$, $\{4,8,12\}$, $\{4,5,8,12\}$ and $\{4,8,12,14\}$

• Draw the transition graph for a Markov chain involving 5 states in which every state has a period of 5 and a transition graph for a 5 state Markov chain in which every state has a period of 3.
